

In regard to Flexible Equipment Authorization paragraph 18

I believe that allowing the Wireless Internet Service Providers to have increased flexibility will help them to better meet the needs of the consumer. This flexibility should only be allowed if the changes are needed to better suit the application that is used. Getting a authorization for each equipment combination seems to be difficult to obtain and because of it, WISPs are not able to accomodate some equipment changes that may need to take place. I think that if the systems parameters are changed then the authorization requirement should remain intact.
